

## Not Another Interaction Checker

Turn interaction complexity into clear clinical decisions

Most interaction checkers and AI tools flag theoretical risks. They rarely reflect real clinical context - leading to:

- ⊗ Overestimated risks
- ⊗ Missed opportunities
- ⊗ and uncertainty in practice

EfficaSafe evaluates interactions using clinical evidence, pharmacokinetics, and clinical relevance. So you can see what actually matters:

- ✔ What requires caution
- ✔ What to monitor
- ✔ What can be safely combined
- ✔ and what may improve outcomes

From fragmented data → to a clear clinical plan

Included with your NTOI membership

EfficaSafe is now available to support your clinical decisions

***First time using EfficaSafe? Start with a simple interaction search.***

### Clinically relevant interactions

Evidence-based assessment of what really matters

### Clear monitoring guidance

Know which clinical and lab parameters to monitor

### Treatment optimization

Discover beneficial combinations and synergistic effects

### Drug-induced depletions

Identify and manage nutrient depletion caused by medications

### Continuous evidence updates & alerts

Stay informed when client interactions have been updated
